A close-up photograph of a person's forehead skin before any treatment. The skin appears normal with visible pores and some minor blemishes.

인셀덤사용전

A close-up photograph of the same forehead skin 7 days after treatment. The skin is significantly red and covered with white, flaky peeling patches, indicating a strong exfoliation effect.

7일프로그램후 각질

A close-up photograph of the forehead skin after the peeling process. The skin is much smoother, with the redness and flaking removed, showing a more uniform and healthy complexion.
